

HEALBE GoBe API

This is the API for the GoBe smart band. Now you have a unique opportunity to make this world more healthy and happy with the HEALBE API!

- Create your own applications for the HEALBE GoBe.
- Integrate data such as: Calorie intake and Energy balance, Pulse, Stress level, sleep Quality, Water balance and others for your product.

Our team runs API to extend your capabilities.

HEALBE SDK

The HEALBE SDKs are native software libraries for iOS and Android (iOS 12, Android 5+). They provide full interaction with any HEALBE GoBe device (via Bluetooth LE) and HEALBE server applications. Libraries provide a high-level native interface (SDK API) for use in partner applications with any model of GoBe smart band, which allows you controlling devices, access their functions, and any information from GoBe sensors.

Android SDK

Public Android application and several other pilot partnership projects are based on it. [The repository of the project](#) also contain example demo application illustrating the work with the SDK.

Other documents:

- [The README](#): describes how to get started.
- [Documentation for the HEALBE GoBe SDK \(JavaDoc\)](#).
- [HealthData](#) - The following methods are used to obtain available data..

iOS SDK

- [The README](#): describes how to get started.
- [The repository of the project](#).
- [Documentation for the HEALBE SDK](#).
